Guest Editors
ASC 2026 Special Issue
IEEE Transactions on Applied Superconductivity

Dear Guest Editors,

Please find enclosed our manuscript, “A Compact 11 GHz Split Cavity for Rapid RF Evaluation of Superconducting Films in a Standard PPMS,” for the ASC 2026 special issue of the *IEEE Transactions on Applied Superconductivity*. This work was presented at ASC 2026 as 1MPo2D-06.

We report a compact two-piece copper cavity that fits in the 26 mm sample chamber of a standard PPMS. A sputtered Nb film reached $Q_0 = 1.6 \times 10^6$ at 2 K, and because the cavity opens, we inspected the same surface we RF-tested, linking the measured loss directly to film defects.

The manuscript is original, is not under consideration elsewhere, and has been approved by all authors.

Sincerely,

Andre R. Juliao
